

GOLDSPUR® AMUR CHOKECHERRY

Prunus maackii 'Jefspur'

Height: 12' **Spread:** 8'

Location: Zone 2, sun to part shade, rich, well-drained soil

Shape: Compact, uniform

Foliage: Dense, dark green

Notes: Goldspur® is a very distinctive tree with its compact growth habit and dense, dark-green foliage. Creamy white spring flowers produce racemes of tiny edible black fruit that you and the birds will fight over. The golden colored exfoliating bark makes for a wonderful winter presence. As one of the first clones of Amur Cherry, it offers uniformity in this underused species. An excellent small tree for the landscape. Resistant to black knot fungal disease.
